MAGNET-SCHULTZ

SOLENOIDS AND SOLUTIONS

QUALITY SINCE 1912

DC Rotary Solenoid

6
Product Group

GDA

Function

- increasing torque characteristic
- pure rotary operation, angles up to 95°
- with or without adjustable spring return
- left or right hand operation

Construction

- no axial linear shaft movement, shaft supported in enclosed ball races
- free leads are standard
- class B coil insulation and protection classification
 IP 20 DIN VDE 0470/EN 60529
- mounting provided by tapped holes in solenoid faces (also used for attaching spring return)
- round form 6 sizes (type GDC for square form version)

Applications

- shutters, office machines, reject mechanisms, optical, packaging, textile machines
- · general purpose, high endurance for orduous service

Options

- proportional, high torque, double acting type list GDR
- plug base version to suit ZKBX/ZKBG plug connectors
- modifications and special designs on request

Fig.1 GDA with return spring

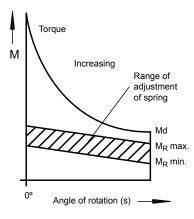

Fig.2 Rotary solenoid characteristic with spring return

Standards

- designed and tested to VDE 0580
- manufactured to ISO 9001

UK

MAGNETSCH

Table Basis

The terms used are defined in Technical Definitions GXX Magnetic forces stated are based on

24V / 5-100% duty coil

- 90% of the rated voltage
- working in the hot condition

- 35°C ambient temperature
- heat-insulated mounting
- armature in horizontal attitude

Duty Rating ED, % of energised time/cycle:

t(on) d

Max. energised time/cycle: $\frac{t(on) - d}{t(on) + t(off)} \times 100$ Max. energised time/cycle: 100% continuous: 40% - 120 secs, 25% - 75 secs, 15% - 45 secs, 5% - 15 secs

Rated Power P₂₀ stated with coil at 20°C

Values given may vary up to 10% owing to inherent and manufacturing tolerances

^{*}Other rotation angles on request

Table notes

0° is completion of energised rotation.

Torque figures M_d (Ncm) are gross. To obtain net values deduct spring torque figures. See page 4.

Supply voltage

Standard voltage: 24V DC. Other voltages upon request. For voltages of ≥ 42V DC a protective earth connection to VDE0580 must be used. A 3-pin plug-base version is available for this purpose - contact our technical department for details.

These devices are manufactured to protection class III and are suitable for operation on low voltage protection circuits only, as per IEC60449.

Spring return

The spring return performance table details the maximum and minimum torques obtainable by spring adjustment. The spring rates enable intermediate settings to be calculated in relation to requirements and solenoid performance at various duty ratings and with over-voltage.

Spring return - Adjustment and handing

The spring return force may be varied by location of the spring tail in the castellations for coarse setting and rotation of spring housing for fine adjustment. The mechanism is interchangeable to either left or right hand - both shaft-ends are provided with slots for assembly of the spring return, which may be changed by:

Removing screws, lifting spring from castellation, removing plastic housing, disengaging spring from shaft flat with knife, sliding spring up and off shaft.

Refitting plastic housing, screws and spring at opposite and reversing spring direction (Fig. 6).

Sliding spring down shaft engaging in shaft flat.

Rotating and engaging spring in castellation for torque required, finally adjusting by screws and slots.

There is no linear movement of the output shafts, which are supported in two enclosed ball-race assemblies.

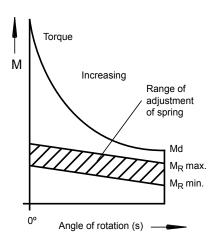

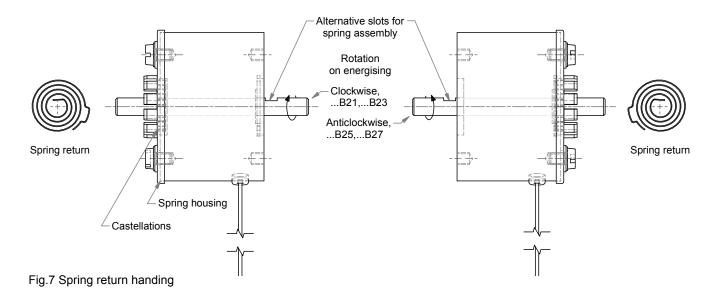

Fig.6 Rotary solenoid characteristic with spring return

The load forces should be applied radially and not axially to obtain maximum life of the bearings and protection of the internal components, which are position fitted to the splined shaft for correct torque performance.

Two solenoids may be coupled together to provide a double-acting unit.

Plain stainless steel output shafts are provided. Alternative shaft arrangements including keyways are available to special order (details on request).

Safety

It is important that the user selects equipment that is suitable for the application, especially if safety would otherwise be compromised. We supply Technical Explanation documents to help users understand our products and assistance is always available from our technical department.

Installation guidelines

Rotary solenoids may be used in every mounting position. To ensure a long service life and to maintain their proper function, please make sure that shocks and higher pressure on the rotation axis in axial direction are avoided.

In case of vertical mounting, the support of added masses should be effected outside the solenoid. Furthermore, it is advisable to support bigger masses which are connected to the shaft outside the solenoid and not with the stops inside the solenoid.

For connection via plug connector Z KB X resp. Z KB G, please pay attention to the max. continuous current of the plug.

Arrangement

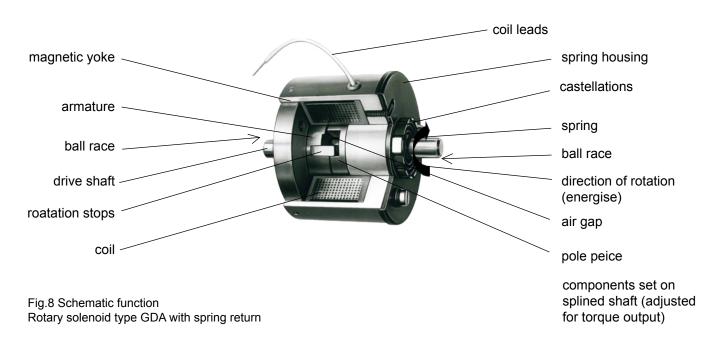

The range comprises 6 sizes, each with 3 alternative maximum rotation angles: 35°, 65°, 95° (other roatation angles to special order - details on request).

The solenoids may be stalled at any angle without electrical or mechanical harm. External stops are desirable for high intertia applications.

Reduced angle should be used from completion of the energised stroke (0°) to obtain maximum torque.

The standard solenoids are provided with free leads. Alternative arrangements with terminal block or plug are available.

Function Principle

The coil's magnetic field attracts, via the fixed magnetic yoke and pole piece, the armature, fixed to the splined shaft, through the air gap formed by their inclined surfaces. This force provides rotary, (without linear) movement on the shaft, within the stop limits.

Special

Special solenoids are available to meet the requirements of specific applications, such as short duty rating, high ambient temperature, special voltages, double acting etc., for which full operating, application and working conditions as well as environment should be specified in accordance with Technical Definitions- GXX.

Directives

A statement on compliance with European Directives is available on our website under "Our Technology".

Order example: GDAX 050 X20 B21 24V 100%

Order Codes Table:

Order Example	GDA	X	050	X20	B21	24V 100%
Group Basic Construction	GDA					
Modification code		X = 95° Y= 65°, 35°				
Size			025 035 050 060 075 100			
Arrangement & Basic protection				X20		
Design number					95°: B01 (without spring) B21 (with spring - page 6) B25 (with spring - page 6) 65°: B01 (without spring) B21 (with spring - page 6) B25 (with spring - page 6) B25 (with spring - page 6) B35°: B03 (without spring) B23 (with spring - page 6) B27 (with spring - page 6)	
Voltage & Duty Rating						24V , 205V 100% , 40%, 25%, 15%, 5%
